

Hydraulic Selector Valve 3-Way Two-Position

6479510

• This is a 3-way two-position selector valve. It is designed for directing flow from one pump to either of two hydraulic circuits. This is a pneumatically actuated valve that can be operated from the cab.

Operation: Flow enters the valve at the inlet port. When the actuator is pushed in, the spool shifts allowing inlet flow to reach the work port furthest away from the actuator. When the actuator is pulled out, the spool shifts allowing inlet flow to reach the work port closest to the actuator.

- 60 GPM flow rate
- 4000 PSI max
- #16 SAE port size & thread
- 1/8" NPTF air actuation port
- Ductile cast iron body
- Chrome plated spool
- Metering notches for smooth transition
- Buna N seals
- 2 bolt, any position mounting
- Pneumatically actuated
